Subject: Bruker TopSpin Student Edition

Bruker Instruments has recently announced a new student version of their TopSpin software. This version is essentially the entire TopSpin package minus the data-acquisition component. The student version of TopSpin is available as a node-locked license with a duration of three years, for \$99.

The Facility currently has TopSpin on our Bruker AV-800 spectrometer, and we expect to upgrade our two Bruker DRX-500 spectrometers to TopSpin within this year. We also have TopSpin available for off-line data processing. TopSpin will import and process data from all of our Facility's current liquids NMR spectrometers. For those of you who would like to have off-line NMR data processing available on your own computer, TopSpin would be a good choice since you would be able to get help with it from Facility staff.

If you are interested in this software, please see the Bruker website for more information:
<http://www.bruker-biospin.com/topspin-student.html> .

If you have any questions or comments, please feel free to contact me.
