Dear Varian Spectrometer Users,

I just received confirmation from Bruker that an engineer will be arriving here Tuesday to start the process of upgrading the Inova-300-1 to the new Bruker AV-NEO console. The Inova-300-1 will be shut down on Monday evening (Mar. 27th) in preparation for some electrical work to be done early Tuesday. I do not know at this point how long the system will be unavailable but I expect it will be on the order of 10 days, assuming no complications occur.

The Inova-300-1 host computer will be available for access via Endeavour for a while after the spectrometer is upgraded. The Inova-300-2/Mercury will also be available for a while until it is shut down. However, I recommend that all users remove any and all NMR data from the Varian hosts as soon as reasonably possible.

We will send out further communication when the upgrade has been completed.

Thank you for your consideration.

Dr. J. Harwood, PINMRF Director
